Behavior Based Safety

Track behavioral observations to identify risk and potential injuries

RCI Safety’s Behavior Based Safety application has the capacity to alter or build observation forms for specific facility types, and integrates fully with all other RCI Safety web-based applications.

**Behavior Based Safety — Features**

- Identify, analyze and minimize potential accidents in advance
- Ability to build custom observation forms based on different facility types
- Actions within the behavior are marked Safe, Unsafe and Not Applicable
- Observe barriers that prevent safe working environments
  - Assign and track corrective actions to remove barriers
- Automatically create incidents to follow up barrier observed
- Observations can be reviewed by managers and tracked
- Collect and analyze observation data
- Application allows you to choose what behaviors to analyze
- Generates easy-to-understand reports — in a variety of formats — based on behaviors, locations and degree of compliance with your company’s stated objectives
- Connect behavioral safety observations with root cause analysis to create leading vs. lagging indicator reports
- Observations can be linked back to company policies and training requirements
- Translates automatically into multiple languages
- Directly links with our **BBS EZ Scan** product and **My RCI** mobile application

"RCI offers a fantastic tool that allows us to manage the leading indicators of our Behavior Based Safety process and to optimize the effectiveness of our observations, feedback and reinforcement. We also utilize it to “Close the Loop” on our incident investigation process. Overall, I have been pleased with our results and highly recommend RCI for anyone looking to enhance their safety process."

- **Corey Hopkins**
  - Director of Safety
  - Ag Partners
